COMMITTEE ON ENVIRONMENT AND PUBLIC WORKS

WASHINGTON, DC 20510-6175

BETTINA POIRIER, MAJORITY STAFF DIRECTOR
 RUTH VAN MARK, MINORITY STAFF DIRECTOR

August 17, 2011

The Honorable Lisa P. Jackson,
 Administrator
 U.S. Environmental Protection Agency
 1200 Pennsylvania Avenue, N.W.
 Washington, D.C. 20460

Dear Administrator Jackson,

We are writing to express our concerns over EPA's forthcoming stormwater regulations, specifically post construction limits from newly developed and redeveloped sites (developed sites). We believe agency intends to propose September 2011. Currently, under the Clean Water Act (CWA) section 402 permit programs apply only to discharges from active construction sites. We believe that EPA should regulate developed sites and post-construction stormwater discharges under the agency's statutory authority. We ask that you provide a clear, detailed explanation on all the sources of EPA's authority to promulgate these regulations.

To assist you in addressing our specific concerns, we respectfully request that you respond to the following questions and cite any statutory text, case law or legislative history that you believe supports your interpretation of the CWA. We would appreciate your responses to these responses at least two weeks in advance of proposing your regulations for stormwater discharges from developed sites.

Study and Report to Congress: Timing of Regulations

- CWA sections 401(a)(2)(B)(i), 401(a)(5)(E)(ii), 401(a)(6)(B)(2)(B), 402(d) and 403(d) direct EPA to conduct a study and then report to Congress before developing new stormwater permit regulations. We believe this is a condition that must be satisfied prior to EPA initiating regulatory development. Congress gave the CWA to EPA to implement through the federal government. EPA is developing a new stormwater regulation that will affect private developed sites. We have heard that EPA plans to provide this study and report to Congress sometime in August. When can Congress expect the final private report from EPA?

The Honorable Lisa Jackson

Page 2

2. It is critical that Congress receive this report before EPA issues any proposed rules in this area. The report recommendation should be a report to Congress first. Then Congress can give EPA direction based on that report before the agency issues a proposed rule for public comment. Otherwise, EPA is likely to go far down the path of deciding whether it will enact final regulations – without sufficient opportunities for congressional oversight.
 - a. Will EPA provide enough time to review the report before new regulations are proposed?
 - b. How much time does EPA plan to give Congress to review the report before such a rule is proposed by the agency?
3. According to EPA's own website, the agency plans to issue proposed rules for new developed sites in September 2011, and final rules by October 2012.
 - a. What is the basis for these dates?
 - b. To give Congress enough time to review the forthcoming coming EPA study and then give feedback to EPA, will the agency agree to change its schedule and give more time for public comment before the proposed rule is published by the agency?

Landowner Questionnaires from 2010

1. In laying the foundation for any developed sites regulations, last year EPA EPA gathered information from the real estate industry. In 2010, EPA sent over 3000 informational questionnaires to obtain information from landowners on stormwater management practices, their operations and maintenance costs, and their expense.
 - a. What did EPA learn from these surveys?
 - b. Was the information you were asked for helpful? Please explain.
 - c. Were the time and resources spent by EPA to gather this information worth the effort?
 - d. Is the information being gathered relevant to any proposed rules we will see from EPA regarding developed sites? Why or why not?
 - e. Will EPA make the information gathered from these questionnaires available to Congress and the public as do other agencies in the docket?

Authority and Basis for New Post-Construction Regulations

1. As stated above, EPA's regulations under the Stormwater Pollution Prevention Program are limited to requiring new construction contractors to obtain EPA minimum currently developing post-construction requirements that would require permits to control stormwater discharges after construction has ceased. These could result in new post-construction stormwater permits at already built out sites.

Page 3

- a. Does EPA think it already has the authority to propose new regulations to control stormwater runoff after the construction process ends?
 - b. Does EPA need authorization from Congress to enact new post-construction stormwater regulation?
 - c. In CWA section 403(z)(4)(D) (see page 21 of the addendum), Congress gave EPA authority to develop permit requirements for stormwater discharges "associated with industrial activity." What "industrial activity" will provide the basis for EPA to develop regulations for stormwater discharges from developed property?
2. In the context of small business impact review panel held last year, EPA told participants that new regulatory post-construction requirements could mean that already-built properties might have to make changes to the site to have the "hydrology of the land before construction" and mimicking a "forest, prairie, meadow..."
- a. How would EPA propose that land with homes and buildings already on it have the characteristics of forest, prairie, or meadow?
 - b. What kind of economic impact would such a requirement have on property owners?
 - c. How would EPA determine the appropriate "hydrology of the land before construction" in areas where development has been going on for centuries and in areas that were previously swamps like Washington, D.C. or New Orleans, LA?
3. As explained above, current permit requirements for stormwater apply to operators at active construction sites. For new regulations or programs following construction, regulations should be implemented after stormwater based simply on land ownership.
- a. Might new stormwater regulations require owners, managers, and managers of already-built properties — for example, homeowners, homeowner associations, business owners, and store owners — to get permits to manage stormwater runoff?
 - b. Has EPA done any analysis of the costs to landowners for a program?
4. Court decisions have made clear that EPA only has the authority to regulate the "actual" discharges of pollutants from point sources, which are defined as discharges. Yet, in the addendum, EPA appears to be considering regulatory requirements for discharge "surrogates" like the amount of stormwater flows, or the extent of paved and impervious surfaces in a parking lot. In short, EPA might consider regulations that are not based on actual pollutant discharges, but rather on individual components.

The Honorable Lisa P. Jackson

August 17, 2011

Page 4

- a. What authority, in the CWA or elsewhere, would EPA have on basis to regulate “smog-like” pollutants – as opposed to the actual “discharges” of pollutants themselves?

Property Retrofits

1. EPA has indicated that these new regulations could require that developed sites be “retrofitted” to control stormwater.
 - a. How would these stormwater controls work?
 - b. Would EPA directly impose requirements on landowners or municipalities?
 - c. Would parking lots need to be removed and replaced with more porous surfaces?
2. If EPA does not impose stormwater retrofit requirements directly on land and building owners, it is at least considering imposing those requirements indirectly – through a program where counties and municipalities might be required to enact new regulations for retrofit requirements on landowners.
 - a. Is EPA indeed considering a “back door” regulatory approach to stormwater retrofits on landowners?
 - b. On what basis can EPA compel municipalities to impose federal requirements on landowners?
 - c. Is EPA considering any standard whereby it will not allow any municipality unless they develop stormwater retrofit requirements on landowners?

EPA’s current haste in developing these regulations is unwarranted. Until Congress has received the completed report, it is truly ~~desperately~~ ~~desperately~~ ~~desperately~~ ~~desperately~~ ~~desperately~~ ~~desperately~~ ~~desperately~~ pursuing regulatory development.

Thank you for your prompt attention to this matter.

Sincerely,

Jam M. Ritter
John Barrasso

John R. Baird
